Theme Manual

Sensa - One Page Responsive Template

Version: 1.3

Thank You :)

Thanks for purchasing our template. We really appreciate your support and trust in us. We worked hard to make this template easy to edit as much as possible. Hopefully, you will enjoy using it. Have fun!

How To Install?

Considering that Sensa is HTML template, with fully functional email notification mechanism for sending messages via contact form, all you need to do is to upload all template files via your FTP account to your web server and just to modify few lines of code in *config.php* file. You can check functionality of template locally if you have installed local server (google this: mamp, wamp or xampp).

These are parameters that you need to modify:

- Your email addresses where you want to receive emails filled with informations from contact form.

Note

In config.php file, you will see this pattern:

```
$email = "YOUR_MAIL@HERE.com";    //<-- Your email
```

You need to modify only the value on the right side.

*Do not remove any quote or double quote signs while doing this.
Keep this in mind, it will be functional only on your web server, php file
can not be executed on your local computer.*

And that's all you need to do for your site configuration.
Simple, isn't it :)

Slider Configuration

This template have also support for sliders. There are three types used in template - **background image** slider **testimonial** slider and **image** slider. Here are the examples how you can add/edit sliders in your template.

BACKGROUND IMAGE SLIDER

In the section below you will see example of **background image** slider used in "Home" section in index.html page.

In index.html you have only this line of code:

```
<!--Background Slider Navigation-->
<ul id="slide-list"></ul>
<!-- Background Slider Holder -->
<ul id="supersized"></ul>
```

It is list holder where navigation will be placed and holder for background images. A whole structure of slider (images and configuration) is created in main.js using code like this:

```
jQuery.supersized({
  slide_interval    :    3000,
  transition        :    1,
  transition_speed:    700,
  slide_links:      'blank',
  slides :[
    {image : 'images/header_image_01.jpg'},
    {image : 'images/header_image_02.jpg'},
    {image : 'images/header_image_03.jpg'}
  ]
});
```

More about available slider options and effects you can find here:

<http://www.buildinternet.com/project/supersized/>

TESTIMONIAL SLIDER

In the section below you will see example of **testimonial** slider used in "About" section in index.html page.

Basically you have "ul" element with list of slides that you want to display, and appropriate jQuery selectors for each of them.

```
<div class="testimonial-top-line"></div>
<ul id="testimonial" class="slides testimonial">
  <li>

    <div class="testimonial-image left">
      
    </div>

    <div class="right testimonial-content">
      <p class="testimonial-text white-text">
        The difference between a Designer and Developer,
        when it comes to design skills, is the difference
        between shooting a bullet and throwing it.
      </p>
      <p class="testimonial-author top-30 white-text">
        Scott Hanselman
      </p>
    </div>
    <div class="clear"></div>
  </li>
  <li>
```

```
<div class="testimonial-image left">
  
</div>

<div class="right testimonial-content">
  <p class="testimonial-text white-text">
    The difference between a Designer and Developer,
    when it comes to design skills, is the difference
    between shooting a bullet and throwing it.
  </p>
  <p class="testimonial-author top-30 white-text">
    Scott Hanselman
  </p>
</div>
<div class="clear"></div>
</li>
</ul>
</div>
```

Additionally you can add pager to your slides.

After you create appropriate HTML structure you will have to add this part of code in our main.js file:

```
//Testimonial slider configuration
jQuery("#testimonial").carouFredSel({
  responsive: true,
  width: '100%',
```

```
auto: false,  
pagination: "#testimonial_pager",  
scroll: {  
    fx: 'uncover-fade'  
},  
swipe: {  
    onMouse: true,  
    onTouch: true  
},  
items: {  
    height: 'variable',  
    start: 1  
}  
});
```

You will have to modify it to your own needs (replace it), and note that each html element need to have unique ID or some other attribute that you can use as jQuery selector. In our case ID is **#testimonial**.

More about available slider options and effects you can find here:
<http://caroufredsel.dev7studios.com/index.php>

IMAGE SLIDER

In the section below you will see example of **image** slider used in "About" section in index.html page.

Basically you have "ul" element with list of slides that you want to display, and appropriate jQuery selectors for each of them.

```
<div class="featured_work_image_slider_holder
list_carousel slider_holder">
  <ul id="featured_work_image_slider" class="gallery
image_slider">
    <li>
      
      <a class="preview absolute shadow"
href="images/work/work_large_03.jpg"
data-rel="prettyPhoto[gallery1]">
        <span class="work_item_text">PSD MOCKUP</span>
      </a>
    </li>
    <li>
      
      <a class="preview absolute shadow"
href="images/work/work_large_04.jpg"
data-rel="prettyPhoto[gallery1]">
```

```
        <span class="work_item_text">CORPORATE ID</span>
    </a>
</li>
</ul>
<div class="clear"></div>
<a id="featured_work_prev" class="prev" href="#"></a>
<a id="featured_work_next" class="next" href="#"></a>
</div>
```

Additionally you can add pager to your slides.

After you create appropriate HTML structure you will have to add this part of code in our main.js file:

```
//Image slider configuration
jQuery('#featured_work_image_slider').carouFredSel({
    responsive: true,
    width: '100%',
    auto: false,
    scroll: 1,
    prev: '#featured_work_prev',
    next: '#featured_work_next',
    swipe: {
        onMouse: false,
        onTouch: false
    },

```

```
        items: {
            width: 400,
            height: 'auto',      // optionally resize
item-height
            visible: {
                min: 1,
                max: 3
            },
            start: 0
        }
    });
```

You will have to modify it to your own needs (replace it), and note that each html element need to have unique ID or some other attribute that you can use as jQuery selector. In our case ID is **#featured_work_image_slider**.

More about available slider options and effects you can find here:
<http://caroufredsel.dev7studios.com/index.php>

Portfolio Configuration

Gallery of this section is driven by jquery.isotope.min.js and jquery.prettyPhoto.js plug-in. Thumbnails of the gallery are organized like list items of articles nested within the container with ID of "container".

Article HTML structure looks like this:

```
<div id="container" class="clickable clearfix">
  <div class="element photos personal" >
    
    <a class="preview absolute shadow"
href="images/portfolio/large/ptf_large_01.jpg"
data-rel="prettyPhoto[gallery2]">
      <span class="work_item_text">PHOTO BOOK</span>
    </a>
  </div>
```

```

<div class="element photos whatever">
  
  <a class="preview absolute shadow"
href="images/portfolio/large/ptf_large_02.jpg"
data-rel="prettyPhoto[gallery2]">
    <span class="work_item_text">CHARTS</span>
  </a>
</div>
</div>

```

Items above are in category "photos", "personal" and "whatever", you are specify that under ***class*** attribute value by separating values with space. Each element must have a default class **"element"**.

You can determine specific categories in unordered list with id "filterOptions". Unordered list with id "filters" example:

```

<ul id="filters" class="option-set clearfix center-text
montserrat-font" data-option-key="filter">
  <li><a href="#filter" data-option-value="*"
class="selected">ALL</a></li>
  <li><a href="#filter"
data-option-value=".logos">LOGOS</a></li>

```

```
        <li><a href="#filter"
data-option-value=".photos">PHOTOS</a></li>
        <li><a href="#filter"
data-option-value=".video">VIDEO</a></li>
        <li><a href="#filter"
data-option-value=".whatever">WHATEVER</a></li>
        <li><a href="#filter"
data-option-value=".personal">PERSONAL</a></li>
    </ul>
```

You can extend this filter to fit your own needs.

To change prettyPhoto settings regarding to this section can be found in main.js file.

More about available gallery options, you can find here:

Sources & Credits

Special thanks to creators and contributors of these awesome libraries, we couldn't have done this without them.

Some images like social icons or footer map are not included in PSD. You can easily find them via Google under "social icons" or "vector map".

Need Support?

We tried to help you out with this documentation. So please read carefully. If we fail here, you can always go to our support forum www.support.drythemes.com and "Start a New Discussion" in appropriate category. Our developers will try to solve your issue. Be advised that we do not provide support for larger modifications and plugins. We also do not provide support via email. Thanks for understanding.
